Introduction

The introduction of Activity Based Funding (ABF) in January 2016 represented a significant change to the way in which budgets are allocated to acute hospitals in Ireland and to the role of Diagnosis Related Groups (DRGs) and Casemix methodologies in determining those budgets. The move to ABF was a move from a block granted funding system with Casemix adjustments applied for efficiency to a system whereby Casemix methodologies are used to fund hospitals based on the activity they carry out.

Any ABF funding system relies on there being a relatively stable relationship between cost and activity across years so that prior cost and activity profiles can be used to estimate future funding requirements. The arrival of the Covid-19 pandemic in Ireland in March 2020 and the resulting response by our health services caused a major disruption to the relationship between cost and activity. Our publicly funded acute hospitals were emptied out in order to create capacity for treating Covid-19 patients. At the same time, significant additional expense was incurred in order to ensure as safe as possible an environment in our public hospitals while also securing additional capacity in the private hospital sector. This upheaval resulted in a cost to activity relationship in 2020 and 2021 which was different to that expected in a non-pandemic environment. As a result, a decision was taken that acute hospitals should be funded on a block grant basis in 2022 and 2023. 2024 sees the return of ABF as a funding mechanism for Irish acute hospitals.

This ABF 2024 Price List details the ABF monetary value of each episode of inpatient and day case care carried out based on the DRG assignment and length of stay (LOS) of each treated patient.

Activity in Outpatient Departments (OPD) and Emergency Departments (ED) are currently not within the scope of ABF and are therefore not included in this document.

Significant Changes in the 2024 Price List

There are a number of important changes in the ABF 2024 Price List that must be considered particularly when comparing the evolution of DRG prices and weighted units across years.

The first major change is the move from AR-DRG V8.0, which has been in use since 2015, to AR-DRG V10.0. This change sees the removal of some DRGs and the addition of others but more significantly there has also been a change in the underlying complexity model which determines the complexity level that a case goes into within an ADRG. This means that, in some instances, even though the DRG name has not changed, the cohort of patients falling into that DRG might have a significantly different complexity profile to the cohort of patients in that DRG in prior years. This in turn can result in a significant difference in the LOS profile and/or the price paid for that DRG between the ABF 2024 Price List and previous price lists.

The second major change to note is that due to the impact of the Covid-19 pandemic and its effect on the relationship between cost and activity the ABF Price lists for 2021, 2022 and 2023 were essentially cost inflated versions of the 2020 Price list which was based on pre-Covid cost and activity data. This means that while the prices in those price lists reflected changes in costs at the macro level (i.e. all DRG prices changed by the same percentage each year), they did not reflect changes in costs at the individual DRG level. The availability of costing data for the ABF 2024 price list means that for the first time in a number of years, individual DRG cost changes are being reflected which results in greater year on year change in DRG prices than would normally be expected.

The third major change in the ABF 2024 Price List is the introduction of a common weighted unit for both inpatients and day cases. This change does not affect the price being paid for a DRG but it means that, for the first time, inpatient and day case weighted units can be summed together. There is also a common admitted patient base price which replaces the previously separate inpatient and day case base prices. The effect of this change will only be seen if comparing RVs or WU across years. Any changes in DRG price are due to one of the other changes mentioned above.

Finally, hospital type factors have been introduced into the ABF 2024 Price List **for ABF purposes only**. These factors are intended to equalise any ABF advantage / disadvantage a hospital may be subject to due to its model of operation. Therefore, for ABF purposes, the value of a case falling into a DRG is calculated as $WU * Base Price * Hospital Model Factor$. **For all other purposes, the DRG prices should be taken directly from this price list as they represent a national average price across all institutions.**

Diagnosis Related Groups

Diagnosis Related Groups are a means of classifying patient hospital encounters into a manageable number of groups which can be used to describe the mix of cases or Casemix of the activity being carried out by a hospital. The DRGs are designed to group cases which are clinically similar and which are expected to consume a similar amount of resources. DRGs and Casemix systems are widely used internationally to manage and fund healthcare systems as well as for performance and quality monitoring.

For the ABF 2024 Price List, the HPO have moved to AR-DRG V10.0 from AR-DRG V8.0. See “Significant Changes in the 2024 Price List” for more details.

The AR-DRG classification has a hierarchical structure. The topmost level is the Major Diagnostic Category (MDC) which categorises cases roughly along body system lines. Within MDC, cases are further partitioned into surgical, medical and other categories depending on whether the case involved an operating room (OR) procedure, a non-OR procedure or neither an OR nor a Non-OR procedure. Within these partitions, cases are assigned to Adjacent DRGs (ADRGs) which contain a number of DRGs which are generally defined by the same diagnosis or procedure lists. The DRG is the lowest level in the classification and it splits out ADRGs by differing complexity levels. Here complexity is an indication of the resource consumption associated with the cases in a DRG and may not correspond to a clinical interpretation of the complexity of a case.

There are 397 ADRGs and 795 DRGs within the AR-DRG classification system. 87 of the ADRGs have no further split by complexity level while the remaining 310 ADRGs are split by complexity to make up 708 DRGs.

In addition to the 795 AR-DRGs, two day case DRGs have been created specifically for use in Ireland. These are J98Z UV Therapy and R99Z Oncology Repeat. Attendance which brings to the total number of DRG used in Ireland to 797.

The DRGs are identified by a 4 character code followed by a description of the DRGs content. The first character in the code is alphabetic and refers to the MDC that the DRG belongs to. The second and third characters are numeric and they identify both the partition and the ADRG to which the DRG belongs. The fourth character identifies the complexity level associated with the DRG.

Partitions are identified in the DRG code as follows:

- DRGs numbered 01-59 indicate the interventions partition
- DRGs numbered 60-99 indicate the medical partition

Note that this is a change from the “Surgical”, “Medical”, “Other” partition definitions in prior versions of AR-DRG.

Complexity levels are identified as A, B, C, D or Z where A indicates the DRG with the highest complexity level, D the DRG with the lowest complexity level and Z indicates that there is no complexity split within the ADRG. Not all ADRGs will contain DRGs corresponding to all 4 complexity levels. The precise meaning of the complexity level is specific to each ADRG and is given in the DRG description.

For example:

I04B Knee replacement, minc

I indicates MDC 08 Diseases and disorders of the musculoskeletal system and connective tissue

04 is the ADRG number and indicates that this is an intervention DRG

B indicates a case of minor complexity

Throughout the AR-DRG system several abbreviations are used to indicate the level of severity and/or complications associated with a particular DRG. These are listed below.

+/-

EXTC

MAJC

INTC

MINC

With/Without

Extreme Complexity

Major Complexity

Intermediate Complexity

Minor Complexity

Weighted Units, Base Price and Relative Values

The generic currency of the ABF system is referred to as the Weighted Unit (WU). The WU is a relative measure of the resource consumption of cases in an ABF system and is set so that the average resource consumption or WU level across all cases to be funded is 1. In this way cases which consume more resources than average have a WU value greater than 1 and those which consume fewer resources than average have a WU value less than 1.

Associated with the notion of a WU is the concept of a base price. The base price is the monetary value associated with 1 WU and is therefore the average value per case across all cases to be funded. The monetary value of any case can be calculated by multiplying its WU value by the base price.

In a change from previous years, a definition of the weighted unit has now been adopted so that the same WU and base price is applicable to both inpatients and day cases. This means that WU relating to inpatients and day cases can be directly added together to get an overall complexity adjusted measure of activity for all admitted patients.

The DRG prices presented in this document are given in terms of relative values (RVs). Relative values express the prices of the various payments for each DRG in terms of WUs. The RVs are used to determine the total WU value for a case and hence the price to be paid for that case.

Most DRGs will have a separate RV quoted for:

- Day cases
- Sameday Cases
- One Day Cases
- Low Outlier Per Diem
- Inlier Cases
- High Outlier Per Diem

The admitted patient base price for 2024 is €3,606.

The relative values and prices presented in this document are applicable to the entire episode of care from admission to an inpatient or day case bed to discharge from hospital. They cannot be used to infer either a cost or price for the treatment of a particular diagnosis, or the provision of a particular intervention or procedure in isolation of the entire episode of care. The HPO does not provide pricing information for individual diagnoses, interventions or procedures.

Hospital Model Factors

Hospital model factors (HMF) are derived as part of the annual ABF price setting process in an effort to acknowledge and account for the fact that the operating model of a hospital can systematically affect ABF performance. The factors have been derived based on the ratio of the base cost for the different hospital types compared to the overall base cost. Applying the resulting ratios as price adjustment factors means that the difference in cost base in these hospital types are recognised and hospital within each type are essentially only competing with hospital of the same type in terms ABF efficiency.

The hospital model factors are intended to be used only for ABF purposes. For all other purposes, the DRG prices should be taken directly from this price list as they represent a national average price across all institutions.

The ABF 2024 hospital model factors are given in table 1 while the list of hospitals of each model type are listed in table 2.

Table 1: Hospital Model Adjustment Factors 2024

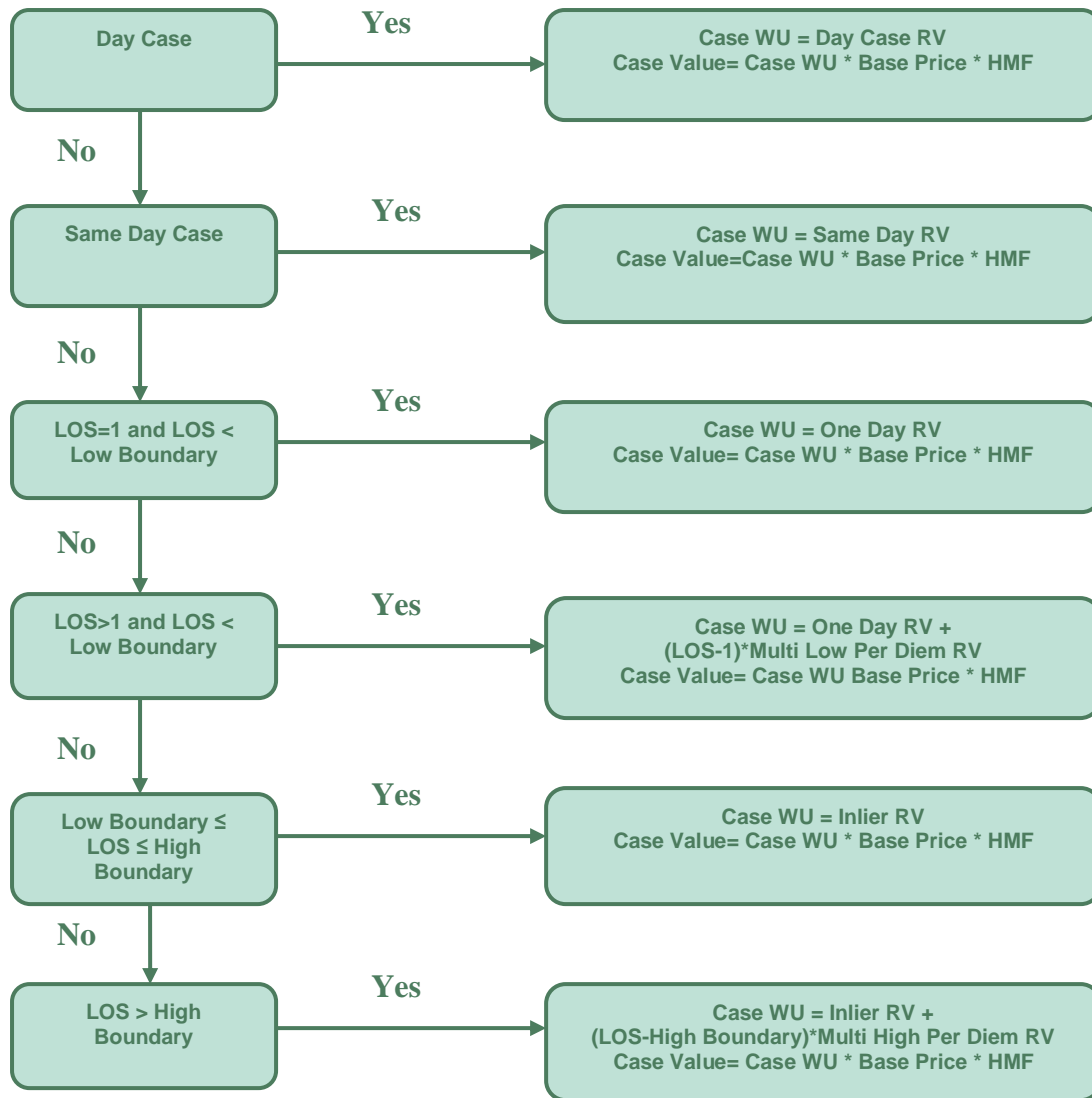

| Model / Type | Factor |
|--------------|--------|
| Model 4 | 1.00 |
| Model 3 | 1.01 |
| Model 2 | 1.04 |
| Paediatric | 1.19 |
| Maternity | 0.90 |
| Specialist | 1.02 |

Table 2: List of ABF Hospitals by Model Type

| Model 4 | Model 3 | Model 2 | Paediatric | Maternity | Specialist |
|------------------|---------------|----------------|---------------|--------------------|------------|
| Beaumont | Cavan | Ennis | CUH Crumlin | Coombe | Cappagh |
| Cork | Connolly | Louth | CUH Tallaght | Holles St. | Croom |
| Galway | Drogheda | Mallow | CUH Temple St | Limerick Maternity | Eye & Ear |
| Limerick | Kerry | Monaghan | | Rotunda | |
| Mater | Kilkenny | Nenagh | | | |
| St Vincents | Letterkenny | St Colmcilles | | | |
| St. James' | Mayo | St. Johns | | | |

| | Portlaoise | | | | |
| | Sligo | | | | |
| | Sth Tipperary | | | | |
| | Tullamore | | | | |
| | Wexford | | | | |

Flow Chart for Applying the ABF Price List

The flow chart below describes how to correctly implement the ABF 2024 Price List.

Notes:

1. Day cases are identified using HIPE question 16 - *Was this a day case? (A day case is a patient who is admitted to hospital on an elective basis for care and/or treatment which does not require the use of a hospital bed overnight and who is discharged as scheduled)*
2. Length of stay is calculated as date of discharge - date of admission. The length of stay for cases admitted and discharged on the same day is set to 0.5.
3. Same day cases are defined as **non-elective inpatient discharges** which are admitted and discharged on the same date i.e. date of discharge=date of admission. Same day cases are distinct from day cases as defined in note 1 above.

Pseudocode for Applying the ABF Price List

IF DISCHARGE_DATE-ADMISSION_DATE=0 THEN LOS=0.5;
ELSE LOS= DISCHARGE_DATE-ADMISSION_DATE

IF DAYCASE INDICATOR=1 THEN DO;
 WU=DAYCASE;
 VALUE=WU*DAYCASE_BASEPRICE*HMF;
END;

ELSE IF DAYCASE INDICATOR=0 THEN DO;

 IF LOS=0.5 THEN WU=SAMEDAY;
 ELSE IF LOS=1 AND LBOUND GT 1 THEN WU=ONEDAY;
 ELSE IF LOS>=2 AND LOS< LBOUND THEN WU=ONEDAY+(LOS-1)*MULTILOW;
 ELSE IF LOS>=1 AND LOS>= LBOUND AND RAWLOS<=HBOUND THEN WU=INLIER;
 ELSE IF LOS>=2 AND LOS> HBOUND THEN WU=INLIER+(LOS- HBOUND)*MULTIHIGH;

 VALUE=WU*INPATIENT_BASEPRICE*HMF;

END;

Notes: Length of stay is calculated as date of discharge - date of admission. The length of stay for cases admitted and discharged on the same day is set to 0.5.

Lbound and Hbound represent the low and high length of stay boundaries.

Hospital Model Factor (HMF) should only be applied for ABF purposes.

Example I04B Knee replacement, minc (Inpatient, without HMF)

Low Boundary = 2 days

High Boundary = 9 days

Inlier Price = €16,504

| Length of Stay | Case Type | WU Calculation | WU | Price Paid |
|----------------|--------------|----------------|-------|------------|
| 0.5 | Same Day | 2.777 | 2.777 | €10,014 |
| 1 | One Day | 3.377 | 3.377 | €12,177 |
| 7 | Inlier | 4.577 | 4.577 | €16,504 |
| 12 | High Outlier | 4.577+3*0.301 | 5.480 | €18,813 |

Notes:

The values presented in this table have been rounded therefore multiplying the WU value by the base price will not yield the exact price to be paid.

I04B Knee replacement, Minor Complications Payment Curve

Important Notes on Using the Price List

The following technical notes should be understood and adhered to when using the information contained in the price list.

1. The weighted unit values and prices quoted in this document are intended for use in determining the DRG value of ABF activity undertaken during 2024 only. These prices should not be applied to activity from other years.
2. The RVs and base prices contained in this price list have been generated as a complementary pairing and should only be used in conjunction with each other. It is not valid to take the base prices from one year and apply them the RVs/WU from another year to obtain estimates of activity value.
3. The relative values and prices presented in this document are applicable to the entire episode of care from admission to an inpatient or day case bed to discharge from hospital. They cannot be used to infer either a cost or price for the treatment of a particular diagnosis, or the provision of a particular intervention or procedure in isolation of the entire episode of care. The HPO does not provide pricing information for individual diagnoses, interventions or procedures.
4. To correctly derive the 2024 ABF value of activity from this price list, the appropriate hospital model factor must be applied. I.e. the ABF value is calculated as $WU * Base Price * HMF$.
5. The value of activity derived by applying this price list to the 2024 HIPE activity data does not include ABF co-payments to hospitals for:
 - a. high cost oncology drugs
 - b. premium associated with agency staff

These co-payments are made at the hospital level and are not broken down to the individual DRG level.

6. In instances where there are insufficient case numbers to derive a reliable price for a particular complexity level within an ADRG, cases are pooled and a common price is set for 2 or more DRGs within the ADRG.
7. A DRG price is quoted if there has been at least 1 case reported on the national HIPE file. In particular, the presence of a day case price for a DRG where the case numbers are small is not an indication that this activity should be undertaken as a day case.

INPATIENTS

| DRG | DRG Description | Indicative Inpatient Cases | Inpatient Inlier Price | Same Day RV | One Day RV | Multi Low RV | Inlier RV | Multi High RV | ALOS | Low Boundary | High Boundary |
